2024 ANNUAL DRINKING WATER QUALITY REPORT
EAST COCALICO TOWNSHIP AUTHORITY
PWSID #7360113

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, ó hable con alguien que lo entienda. (This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.)

WATER SYSTEM INFORMATION

This report shows our water quality and what it means. If you have any questions about this report or concerning your water utility, please contact **East Cocalico Township Authority (ECTA)** at **717-336-1731**. We want you to be informed about your water supply. If you want to learn more, please attend any of our regularly-scheduled meetings. They are held the last Tuesday of each month at 7:00 p.m. at the East Cocalico Township Municipal Building.

SOURCES OF WATER

Our water sources are ground water sources as follows: Wells 2A, 3A, 5&6, 7, 8A, 9, 10, 11, 14, F and M.

A Source Water Assessment of our sources was completed by the PA Department of Environmental Protection (PADEP). The Assessment has found that our sources are potentially most susceptible to heavy and light manufacturing facilities, fuel stations, agricultural (fertilizer and manure application), residential (heating oil tanks, herbicide and pesticide use), transportation corridors and sanitary sewer lines. Overall, our sources have high risk of significant contamination. A summary report of the Assessment is available on the ECTA website at www.eastcocalicotownshipauthority.com, by writing to ECTA at 102 Hill Road, Denver, PA 17517, or can be found on the Source Water Assessment Summary Reports eLibrary web page: www.depgreenport.state.pa.us/elibrary/GetFolder?FolderID=4490. Complete reports were distributed to municipalities, water supplier, local planning agencies and PADEP offices. Copies of the complete report are available for review at the PADEP Southcentral Regional Office, Records Management Unit at 717-705-4700.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

MONITORING YOUR WATER

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2024. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The year monitored is included in the Detected Sample Results tables.

DEFINITIONS AND ABBREVIATIONS

Action Level (AL) – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) – The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) – The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Minimum Residual Disinfectant Level (MinRDL) – The minimum level of residual disinfectant required at the entry point to the distribution system.

Level 1 Assessment – A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment – A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Treatment Technique (TT) – A required process intended to reduce the level of a contaminant in drinking water.

Mrem/year = millirems per year (a measure of radiation absorbed by the body)

pCi/L = picocuries per liter (a measure of radioactivity)

ppb = parts per billion or micrograms per liter (ug/L)

ug/L = micrograms per liter

ppm = parts per million or milligrams per liter (mg/L)

ppq = parts per quadrillion or picograms per liter

ppt = parts per trillion or nanograms per liter

CCR = Consumer Confidence Report

DETECTED SAMPLE RESULTS

Chemical Contaminants								
Contaminant	MCL In CCR Units	MCLG	Highest Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Disinfectants & Disinfection By-Products								
Chlorine	4 MRDL	4 MRDLG	1.8	1.5-1.8	ppm	2024	N	Disinfectant added to reduce bacterial growth
Haloacetic Acids**	60	-	8.58	8.21-8.94	ppb	2024	N	By-product of drinking water disinfection
Trihalomethanes**	80	-	25.5	18.9-32	ppb	2024	N	By-product of drinking water chlorination
Inorganic Contaminants								
Arsenic	10	0	3.0	1.0-3.0	ppb	2024	N	Erosion of natural deposits
Barium	2	2	0.68	.01-0.68	ppm	2024	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Fluoride	2*	2	0.97	0.97-0.97	ppm	2024	N	Erosion of natural deposits; Discharge from fertilizer and aluminum factories
Nickel	100	100	.002	.001-.003	ppm	2024	N	Erosion of natural deposits; Discharge from metal refineries.
Nitrate	10	10	7.1	1.64-7.27	ppm	2024	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Volatile Organic Contaminants								
cis-1.2-Dichloroethylene**	70	70	2.4	1.0-2.4	ppb	2024	N	Discharge from industrial chemical factories
1,1-Dichloroethylene**	7	7	5.2	1.7-5.2	ppb	2024	N	Discharge from industrial chemical factories
Trichloroethylene**	5	0	13.1	0.6-13.1	ppb	2024	N	Discharge from metal degreasing sites and other factories
Tetrachloroethylene**	5	0	6.6	1.6-6.6	ppb	2024	N	Discharge from factories and dry cleaners
Per- and Polyfluoroalkyl Substances (PFAS)								
Perfluorooctanoic Acid**	14	8	3.6	0.0-4.35	ppt	2024	N	Discharge from manufacturing facilities and runoff from land use activities
Perfluorooctanesulfonic Acid**	18	14	3.97	0.0-4.52	ppt	2024	N	Discharge from manufacturing facilities and runoff from land use activities
Radioactive Contaminants								
Gross Alpha Particle Activity	15	0	3.9	3.9-3.9	pCi/L	2023	N	Erosion of natural deposits
Combined Uranium	30	0	6.5	1.1-6.5	ug/L	2023	N	Erosion of natural deposits

Combined Radium	5	0	1.2	1.1-1.2	pCi/L	2023	N	Erosion of natural deposits
Secondary Contaminants								
Sulfate	250	250	62.2	14.4-169	ppm	2024	N	Natural sources

* EPA's MCL for fluoride is 4 ppm. However, Pennsylvania has set a lower MCL to better protect human health.

** Compliance is based on the average of multiple values or the highest running annual average. The Detected Sample Results represent individual samples.

Entry Point Disinfectant Residual

Contaminant	Minimum Disinfectant Residual	Lowest Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine***	0.40	.49	.49-2.85	ppm	2024	N	Water additive used to control microbes

*** Entry point chlorine levels of less than 0.40 ppm did not exceed 4 hours of pump operation time.

Lead and Copper

Contaminant	Action Level (AL)	MCLG	90th Percentile Value	Units	# of Sites Above AL of Total Sites	Sample Date	Violation Y/N	Sources of Contamination
Lead	15	0	0	ppb	1 out of 20	2022	N	Corrosion of household plumbing systems
Copper	1.3	1.3	.61	ppm	0 out of 20	2022	N	Corrosion of household plumbing systems

OTHER VIOLATIONS

There are no violations to report for the 2024 monitoring period.

ADDITIONAL MONITORING

In 2024, ECTA collected samples as part of the United Stated Environmental Protection Agency's (USEPA) Fifth Unregulated Contaminant Monitoring Rule (UCMR-5). Additional information regarding UCMR-5 and ECTA's results can be found in the attached Public Notification and online at https://www.ect.town/east-cocalico-township-authority/files/ucmr-5.

UCMR-5

Contaminant	Reported Level*	Range of Detections	Units
Lithium	0.01568	0.0102-0.0257	ppm
Perfluorobutanesulfonic Acid	0.00000428	0.0000031-0.0000056	ppm
Perfluorohexanoic Acid	0.0000032	0.0000032-0.0000032	ppm
Perfluorooctanesulfonic Acid	0.0000044	0.0000040-0.0000049	ppm
Perfluorooctanoic Acid	0.00000435	0.0000042-0.0000045	ppm
Perfluoropentanoic Acid	0.0000036	0.0000033-0.0000039	ppm

*The level reported is an average of all detectable sample results

EDUCATIONAL INFORMATION

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water run-off, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to assure that tap water is safe to drink, EPA and DEP prescribe regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

About Lead: Elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. East Cocalico Township Authority is responsible for providing high quality drinking water and removing lead pipes, but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk.

Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact East Cocalico Township Authority at 717-336-1731. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at http://www.epa.gov/safewater/lead.

About Nitrate: Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than 6 months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agriculture activity. If you are caring for an infant, you should ask for advice from your health care provider.

About Arsenic: While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Service Line Inventory: ECTA prepared an initial service line inventory, in accordance with the USEPA Lead and Copper Rule Revision, submitted in October 2024. The service line inventory identifies the plumbing material for both the ECTA- and privately-owned water service line for each property connected to the public water system and is being updated continuously as new information is made available. The initial service line inventory can be viewed on our website at https://www.ect.town/east-cocalico-township-authority/pages/lead-copper-rule-revision or by visiting the ECTA office at 102 Hill Road, Denver, PA 17517 between 8:00 AM and 4:40 PM.

This report, along with forms and information pertaining to the EAST COCALICO TOWNSHIP AUTHORITY, are available on the ECTA's website at www.eastcocalicotownshipauthority.com.

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

AVAILABILITY OF MONITORING DATA FOR UNREGULATED CONTAMINANTS

ESTE INFORME CONTIENE INFORMACIÓN MUY IMPORTANTE SOBRE SU AGUA DE BEBER. TRADUZCALO O HABLE CON ALGUIEN QUE LO ENTIENDA BIEN.

Our water system has sampled for a series of unregulated contaminants. Unregulated contaminants are those that don't yet have a drinking water standard set by the United Stated Environmental Protection Agency (USEPA). This is known as the fifth Unregulated Contaminants Monitoring Rule (UCMR-5). The purpose of monitoring for these contaminants is to help USEPA decide whether the contaminants should have a standard. As our customers, you have a right to know that these data are available. Results can be found online at https://www.ect.town/east-cocalico-township-authority/files/ucmr-5.

What should I do?
There is nothing you need to do at this time. You may continue to drink the water. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What happened? What was done?
ECTA collected samples as part of the USEPA UCMR-5 monitoring.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

For more information, please contact Michael Galley, East Cocalico Township Authority at 102 Hill Road, Denver, PA 17517; Phone (717) 336-1731.
